# Algorithm for management of patients with suspected acute coronary syndrome in emergency department

# Acute ischemia pathway

# Result from the randomized trials of invasive (Inv) vs. conservative (Cons) strategies in UA/NSTEMI

# **Short-Term Risk of Death or Nonfatal MI in Patients With UA \***

## **High Risk**

**(At least 1 of the following features must be present)**

### **History**

- Accelerating tempo of ischemic symptoms in preceding 48 hrs

### **Character of pain**

- Prolonged ongoing (>20 min) rest pain

### **Clinical findings**

- Pulmonary edema, most likely related to ischemia
- New or worsening MR murmur
- S3 or new/worsening rales
- Hypotension, bradycardia, tachycardia
- Age > 75 y

### **ECG findings**

- Angina at rest with transient ST-segment changes > 0.05 mV
- Bundle-branch block, new or presumed new
- Sustained ventricular tachycardia

### **Cardiac markers**

- Markedly elevated (eg, TnT or TnI > 0.1 ng/mL)

# **Short-Term Risk of Death or Nonfatal MI in Patients With UA \*\***

## **Feature**

### **History**

- Prior MI, peripheral or cerebrovascular disease, or CABG, prior aspirin use
- Prolonged (>20 min) rest angina, now resolved, with moderate or high likelihood of CAD
- Rest angina (<20 min or relieved with rest or sublingual NTG)

### **Clinical findings**

- Age>70 y

### **ECG findings**

- T-wave inversions>0.2mV
- Pathological Q waves

### **Cardiac markers**

- Slightly elevated (eg, TnT>0.01 but <0.1 ng/mL)

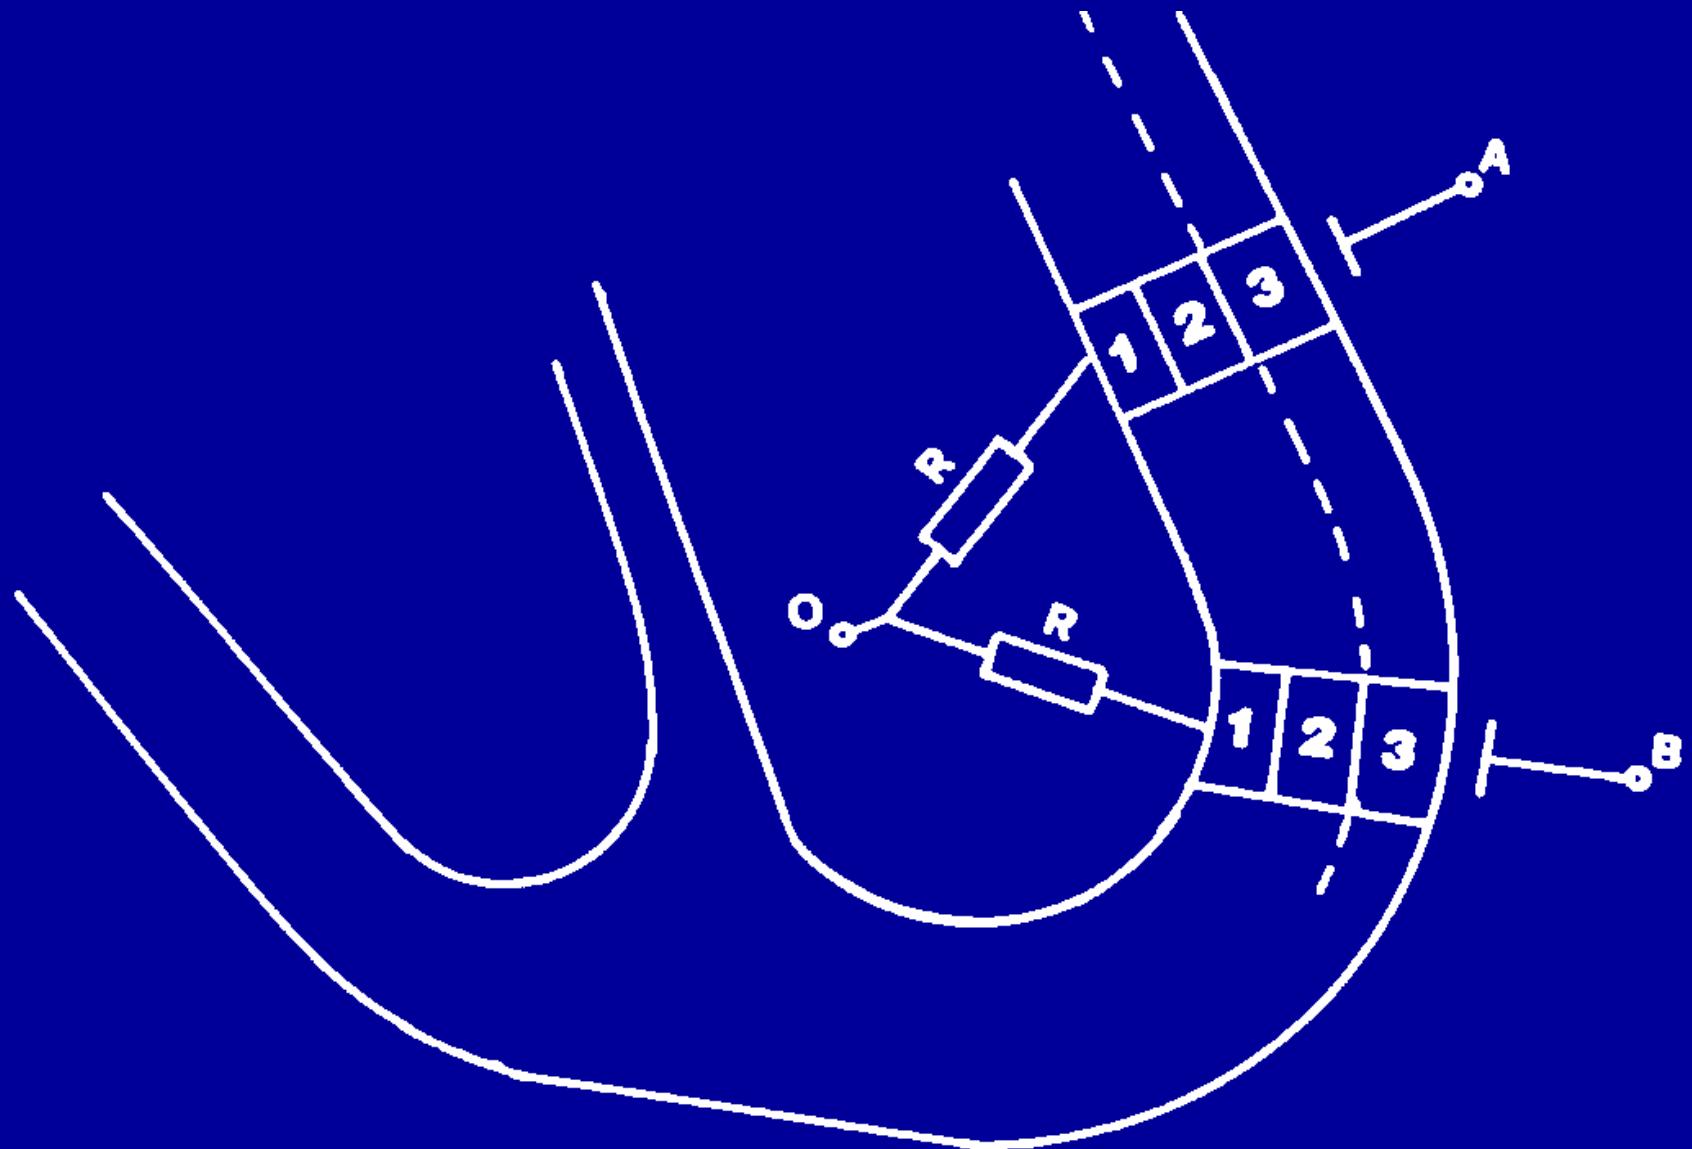

## **Intermediate Risk**

**(No high-risk feature but must have 1 of  
the following feature)**

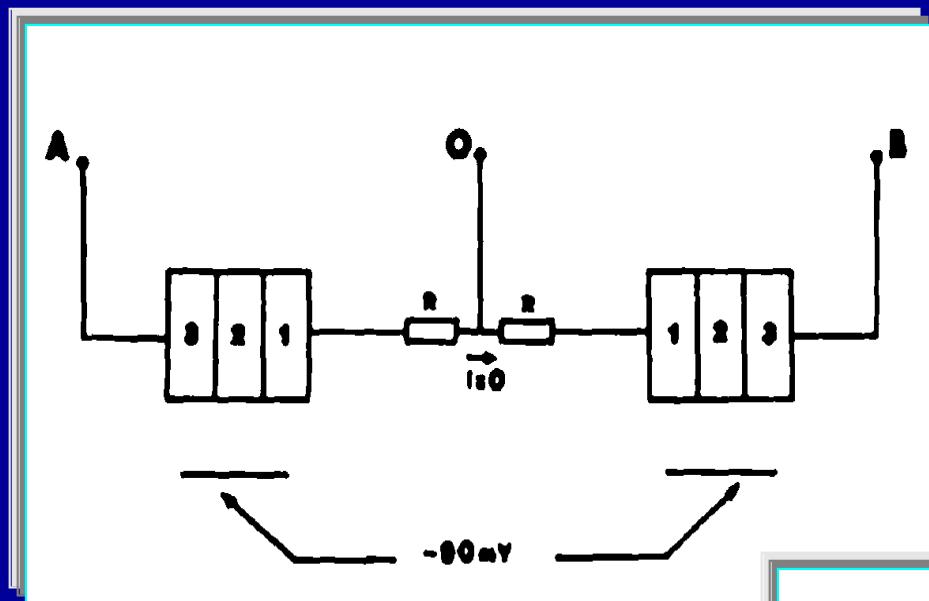

# **Short-Term Risk of Death or Nonfatal MI in Patients With UA \*\*\***

<b>Feature</b>	<b>Low Risk (No high- or intermediate-risk feature but may have any of following features)</b>
<b>History</b>	
<b>Character of pain</b>	<ul style="list-style-type: none"><li>- New-onset CCS Class III or IV angina in the past 2 wk with moderate or high likelihood of CAD</li></ul>
<b>Clinical findings</b>	
<b>ECG findings</b>	<ul style="list-style-type: none"><li>- Normal or unchanged ECG during an episode of chest discomfort</li></ul>
<b>Cardiac markers</b>	<ul style="list-style-type: none"><li>- Normal</li></ul>

# Simulatore elettronico

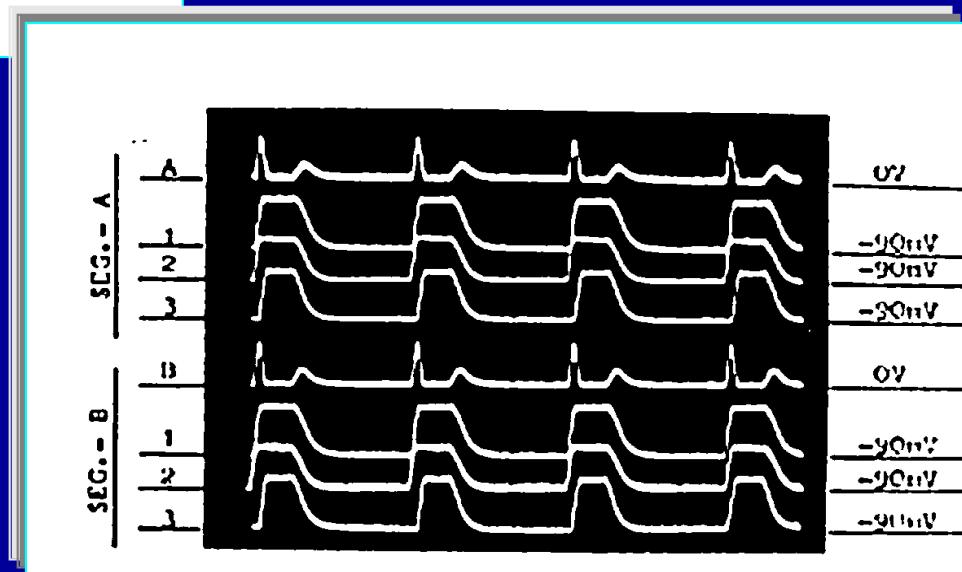

# Simulatore elettronico

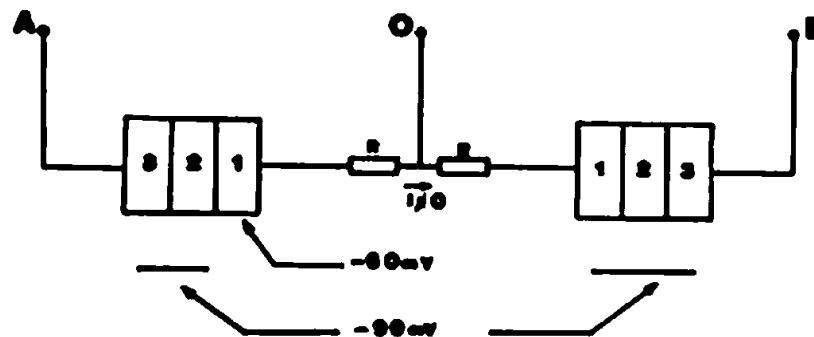

Configurazione circuitale di base. Corrente nel punto 0 (central terminal)=0

Segnali misurati nelle derivazioni O-A, O-B e relativi potenziali d'azione nelle 3 sezioni

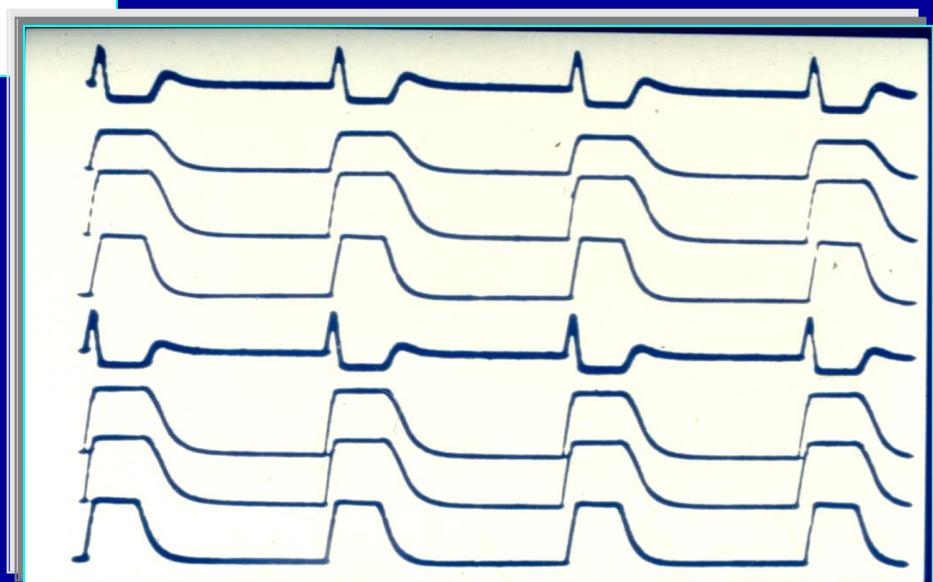

# Simulazione di ischemia subendocardica

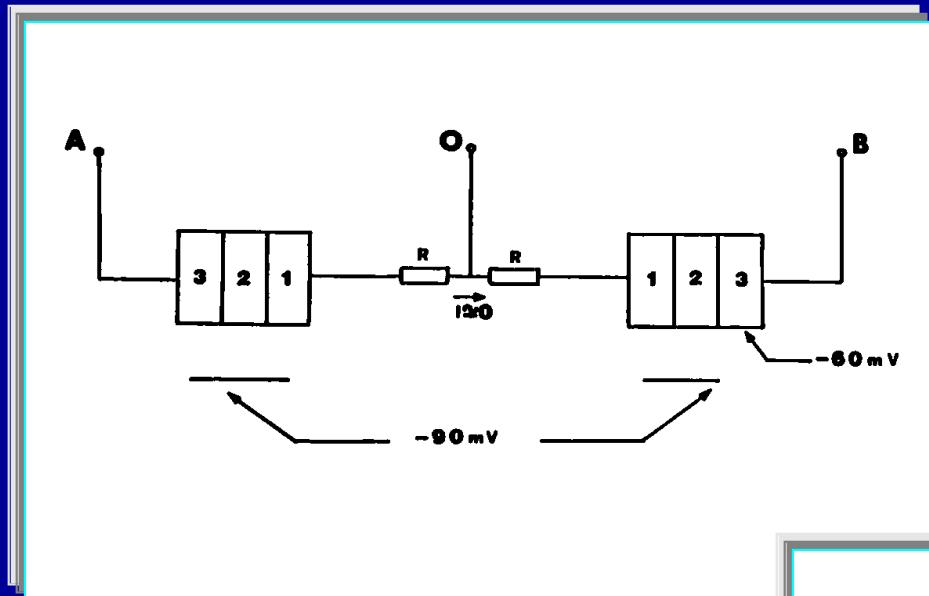

Diminuzione del potenziale  
del generatore 1A

Sottoslivellamento del  
tratto ST in entrambe  
le derivazioni A e B

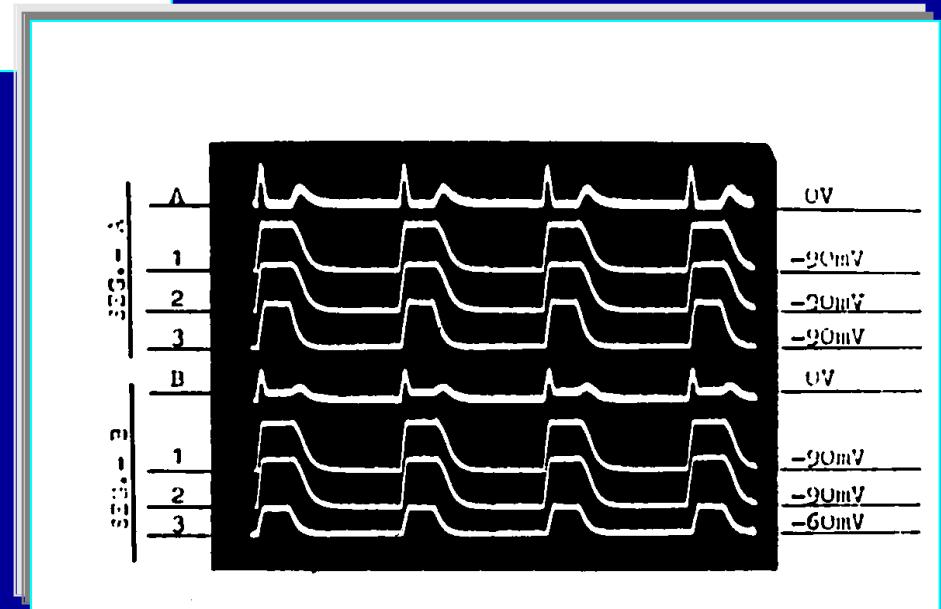

# Simulazione di ischemia subepicardica

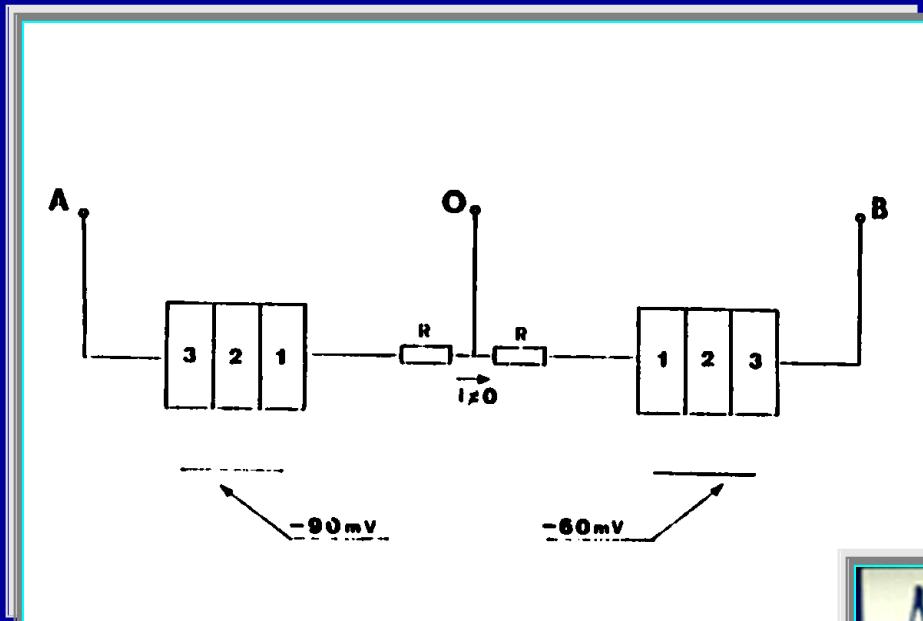

Diminuzione del potenziale  
del generatore 3B

Sopraslivellamento del  
tratto ST nella  
derivazione B

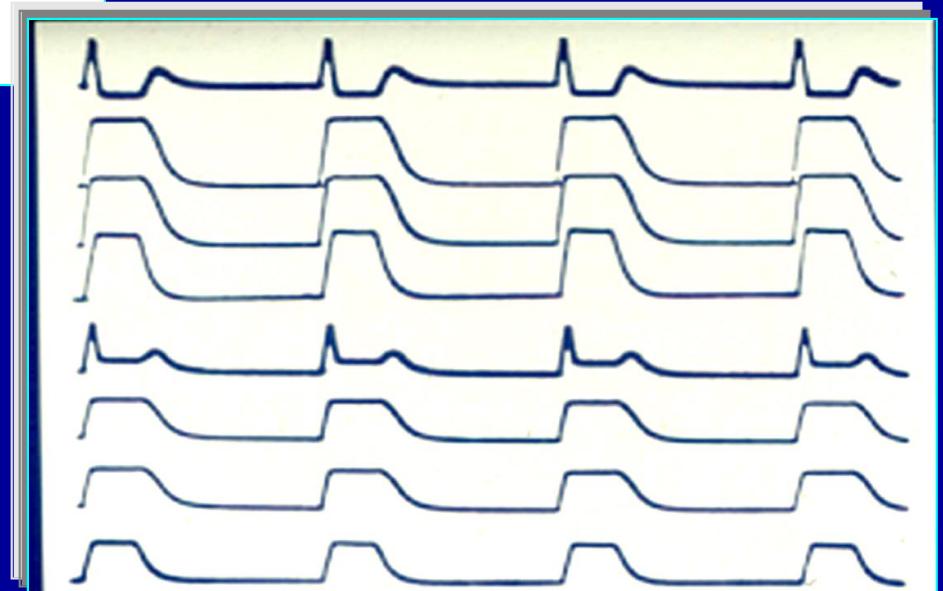

# Simulazione di ischemia transmurale

Diminuzione del potenziale  
dei tre generatori B

Tratto ST sottoslivellato  
in A e sopraslivellato in B
